

With solutions for every phase of a solar power plant, Amperi confirms its presence at its 8th Intersolar

Amperi Renováveis instruments ensure safety and efficiency for the solar sector during installation, commissioning, and maintenance phases — and will be showcased at Intersolar 2025.

Latin America's largest trade fair for the new energy and mobility reality, Intersolar 2025 is coming, and once again, Amperi Renováveis is bringing complete solutions and exclusive product launches designed to drive and transform all stages of the solar process, in accordance with NBR 16274. The event expects over 50,000 visitors across the three days of the fair.

Highlights include curve tracers for plant commissioning and other types of installations, high-tech multimeters, and thermal cameras that help prevent failures while boosting solar plant performance and efficiency — all in a sustainable and electrically safe way.

Standout products at Intersolar 2025 include the I-V600 curve tracer (1500V and 40A), the I-V500 (1500V and 10A), the PVIsoTest insulation tester (up to 1500V), and high-resolution thermal cameras for fast and accurate diagnostics.

“In solar generation, productivity comes with precision. Our solutions enhance every step of a photovoltaic plant — from installation to maintenance. At Intersolar 2025, we’ll present tools and new releases that are transforming field operations with more agility, efficiency, and safety,” says Alan Carvalho, Commercial Director at Amperi.

Amperi Renováveis is a brand under Amperi Soluções Industriais, which brings expertise in equipment and resources for all types of photovoltaic maintenance. The company is specialized in safety and efficiency for the electrical, industrial, solar, and maintenance sectors. All catalog instruments are carefully selected and tested by our team of specialists.

About Amperi

We are the only Brazilian company with exclusive import rights to leading European brands — pioneers in industrial electrical safety and photovoltaic system commissioning.

We proudly represent traditional European manufacturers like HT Instruments and Palazzoli — globally renowned for Italian excellence and commitment to high-reliability, durable, and safe electrical supplies.

For over a decade, we have combined our technical expertise with in-depth knowledge of the Brazilian electrical sector. Naturally, this led us to develop our own products — all designed to deliver real solutions to the sector we serve.

Our goal is to keep positively impacting businesses, driving innovation, and walking side by side with our clients as protagonists of this journey in Brazil. That's why we're the place where people meet high-reliability electrical solutions.
